

HUBUNGAN PERAN SUPERVISI KEPALA RUANGAN DENGAN MOTIVASI PERAWAT DALAM PENCEGAHAN RISIKO JATUH DI RUANG RAWAT INAP RSUD KOTA BOGOR

Latifah Khusnul Khotimah

Abstrak

Pencegahan risiko jatuh dalam menjaga keselamatan pasien tidak terlepas dari motivasi perawat. Perawat yang termotivasi dalam pencegahan risiko jatuh dipengaruhi oleh peran kepala ruangan dalam melaksanakan supervisi. Tujuan penelitian ini untuk menganalisa hubungan peran supervisi kepala ruangan dengan motivasi perawat dalam pencegahan risiko jatuh di Ruang Rawat Inap RSUD Kota Bogor. Penelitian ini menggunakan metode deskriptif analitik dengan pendekatan *cross sectional*. Teknik pengambilan sampling menggunakan *purposive sampling* sebanyak 70 perawat. Gambaran peran supervisi kepala ruangan dengan kategori baik sebanyak 48 perawat (68,6%) dan kategori kurang baik 22 perawat (31,4%). Gambaran motivasi perawat sebanyak 44 perawat (62,9%) termotivasi dan 26 perawat (37,1%) tidak termotivasi. Hasil penelitian dianalisis dengan uji *Chi Square* didapatkan adanya hubungan yang signifikan antara peran supervisi kepala ruangan dengan motivasi perawat dalam pencegahan risiko jatuh ($p\text{ Value} = 0,000$). Kesimpulan penelitian ini kepala ruangan dapat terus melaksanakan evaluasi melalui kegiatan supervisi yang dapat menimbulkan motivasi perawat dalam pencegahan risiko jatuh. Rekomendasi penelitian ini diharapkan kepala ruangan senantiasa berperan untuk meningkatkan pelaksanaan supervisi yang baik agar terjadi peningkatan motivasi perawat dalam pencegahan risiko jatuh.

THE RELATIONSHIP BETWEEN THE HEADROOM'S SUPERVISION ROLE AND NURSE'S MOTIVATION TO PREVENT THE RISK OF FALL AT INPATIENT ROOM OF RSUD BOGOR CITY HOSPITAL

Latifah Khusnul Khotimah

Abstract

Prevention of the risk of falls in maintaining patient safety is inseparable from the motivation of nurses. Nurses who are motivated to prevent fall risk are influenced by the role of the head of the room in carrying out supervision. The study aimed to analyze the relationship between the headroom's supervision role and nurse's motivation to prevent the risk of fall at the Inpatient Room of Bogor City Hospital. This study uses descriptive-analytic methods with a *cross-sectional* approach. Sampling techniques use a purposive sampling of 70 nurses. Description of the headroom's supervision role with a good category of 48 nurses (68.6%) and the less good category of 22 nurses (31.4%). Description of the motivation of nurses as many as 44 nurses (62.9%) motivated and 26 nurses (37.1%) unmotivated. The study results analyzed with the *Chi-Square* test found a significant relationship between the role of room head supervision and nurse's motivation to prevent the risk of fall ($p\text{-Value} = 0.000$). The study concludes that can increase the motivation of nurses in preventing the risk of falling. This study recommends that The headroom's always contributes to improving the performance of good supervision to increase the nurse's motivation to prevent falling.
