

HUBUNGAN *SELF-EFFICACY* DENGAN PERILAKU *CARING* PERAWAT DI RAWAT INAP RSUD DR. DRAJAT PRAWIRANEGARA KOTA SERANG

Ratih Dimas Julianti

Abstrak

Tenaga keperawatan profesional didasari oleh asuhan keperawatan yang baik. Asuhan keperawatan dipengaruhi oleh perilaku *caring* perawat. Perilaku *caring* yang diintergrasikan dengan pengetahuan ilmiah yang dapat meningkatkan kesehatan individu. Komponen yang mempengaruhi perilaku *caring* salah satunya *self-efficacy*. Perawat dengan *self-efficacy* tinggi mempengaruhi sikap peduli dan perhatian saat melakukan asuhan keperawatan. Metode penelitian ini kuantitatif deskriptif analitik menggunakan analisis pendekatan *cross sectional*. Pengumpulan data menggunakan metode *purposive sampling* dengan kuesioner kepada 79 responden. Kuesioner yang digunakan adalah *General Self Efficacy Scale* (GES) dengan 10 pernyataan dan *Caring Behaviors Assessment Tolls* dengan 62 pernyataan. Uji statistik yang digunakan adalah analisis *chi-square*. Hasil statistik menunjukkan bahwa *self-efficacy* perawat rendah sebanyak 45 responden (57%) dan perilaku *caring* perawat dikategorikan rendah dengan 42 responden (53,2%). Berdasarkan hasil uji *chi-square* menunjukkan terdapat hubungan yang signifikan antara *self-efficacy* dengan perilaku *caring* Perawat dengan nilai $p=0,037$ ($p < 0,05$). Hasil riset ini dapat disimpulkan bahwa *self-efficacy* dengan perilaku *caring* perawat di rawat inap RSUD Dr. Drajat Prawiranegara Kota Serang memiliki hubungan yang signifikan. *Self-efficacy* perawat dapat ditingkatkan kembali agar perilaku *caring* dapat meningkat.

Kata Kunci : *Caring*, Perawat, *Self-Efficacy*

THE RELATIONSHIP OF SELF-EFFICACY WITH NURSE CARING BEHAVIOR IN RSUD DR. DRAJAT PRAWINANEGARA SERANG CITY

Ratih Dimas Julianti

Abstract

Professional nursing personnel are based on good nursing care. Nursing care is influenced by the caring behavior of nurses. Caring behavior integrated with scientific knowledge that can improve individual health. One of the components that influence caring behavior is self-efficacy. Nurses with high self-efficacy affect caring and caring attitudes when performing nursing care. This research method is quantitative descriptive analytic using cross sectional analysis approach. Data collection using purposive sampling method with a questionnaire to 79 respondents. The questionnaires used were the General Self Efficacy Scale (GES) with 10 statements and the Caring Behaviors Assessment Tool with 62 statements. The statistical test used is chi-square analysis. Statistical results showed that nurses' self-efficacy was low as many as 45 respondents (57%) and nurses' caring behavior was categorized as low with 42 respondents (53.2%). Based on the results of the chi-square test, it shows that there is a significant relationship between self-efficacy and caring behavior of nurses with p value = 0.037 ($p < 0.05$). The results of this research can be concluded that self-efficacy with caring behavior of nurses in inpatients at RSUD Dr. Drajat Prawiranegara Serang City has a significant relationship. Self-efficacy of nurses can be increased again so that caring behavior can increase.
