Abstrak

Dokumentasi keperawatan merupakan catatan yang otentik yang dilakukan oleh seorang perawat. kualitas dari dokumentasi keperawatan dinilai dari beberapa faktor, diantaranya yaitu tidak adanya panduan atau SOP mengenai pendokumentasian yang sesuai standar, kurangnya pelatihan yang diikuti oleh perawat, tingkat pengetahuan dan sikap perawat, serta kurangnya pendampingan atau supervisi yang dilakukan oleh pihak rumah sakit secara teratur kepada para perawat. Penulisan ini bertujuan untuk mengukur efektivitas dan mengetahui perubahan perilaku perawat dalam pendokumentasian asuhan keperawatan di ruang Hardja IA RS. Bhayangkara Tk. I R. Said Sukanto. Metode yang digunakan adalah dengan melakukan wawancara, observasi dan diskusi bersama. Hasil observasi menunjukkan bahwa terjadi perubahan pada penulisan diagnosis keperawatan disertai *problem etiology* (PE) dari 33,3% menjadi 100%, penulisan rencana tindakan keperawatan yang jelas dan terperinci dari 83,3% menjadi 100%, penyusunan rencana tindakan yang melibatkan klien dan keluarga klien dari 50% menjadi 100%, evaluasi tindakan keperawatan berdasarkan tujuan dan kriteria hasil dari 83,3% menjadi 100% dan kegiatan pendokumentasian pada tahap proses keperawatan ditulis dengan jelas, ringkas dan mudah dari 50% menjadi 100%. Kesimpulannya adalah terdapat pengaruh antara pendampingan dengan perilaku perawat dalam pendokumentasian asuhan keperawatan. Penulis harapkan bahwa pihak manajemen rumah sakit mampu mengevaluasi dan menerapkan kegiatan pendampingan atau supervisi secara rutin.

THE EFFECTIVENESS OF ASSISTANCE ON NURSE BEHAVIOR IN DOCUMENTATION OF NURSING CARE AT ROOM HARDJA IA BHAYANGKARA HOSPITAL TK. I R. SAID SUKANTO

Feny Ditya Hanifah

Abstract

Nursing documentation is an authentic record carried out by a nurse. The quality of nursing documentation is assessed from several factors, including the absence of guidelines or SOPs regarding standardized documentation, lack of training attended by nurses, nurses' level of knowledge and attitudes, and lack of assistance or supervision carried out by the hospital regularly to patients. This writing aims to measure the effectiveness and determine changes in the behavior of nurses in documenting nursing care in the Hardja IA Hospital room. Bhayangkara Tk. I R. Said Sukanto. The method used is to conduct interviews, observations,,s and discussions together. The results of observations showed that there was a change in writing a complete nursing diagnosis with etiology (PE) problems from 33.3% to 100%, and the formulation of nursing goals was made to contain components of goals and outcome criteria from 50% to 83.3%, nursing action plans were prepared refers to the goals with clear and detailed sentences from 83.3% to 100%, the preparation of an action plan is ready and written describing the involvement of the client and the client's family from 50% to 100%, the evaluation of the nursing actions given refers to the goals and criteria for the results of 83, 3% to 100%, evaluation of the client's knowledge about his illness after conscious and independent health promotion from 16.7% to 100% and documentation activities at the stage of the nursing process must be written clearly, concisely and efficiently from 50% to 100%. The conclusion is that there is an influence between mentoring and nurse behavior in documenting nursing care. Researchers suggest to hospital management can regularly evaluate and implement assistance or supervision activities. The authors hope that nurses can increase knowledge and compliance in the documentation of nursing care.
