## **Abstract**

In today's business competitions, many companies are starting to apply some ways to compete in global markets, besides following the development in technology, another way that can be used is by implementing Customer Relationship Management. One of which is, operational CRM that focused on the automation of marketing, sales, and service. In this competition, operational CRM is having the main part in improving the customer's satisfaction. But this time PT. Maju Mapan Citra Industri is not yet applying operational CRM systematically. For that, an Operational Customer Relationship Management information system is needed to be developed at PT. Maju Mapan Citra Industri. As for developing this system, Waterfall method is used, analyze the system using PIECES, design the system using UML that consist of, Use Case Diagram, Activity Diagram, Framework for web interface using Bootstrap and PHP programming language. This research proves that Customer Relationship Management Information System can give access to customer's data, and customer's history data to the marketing representative, and provide feedback service, and clear information to the customers, so customer's satisfaction at PT. Maju Mapan Citra Industri can increase.

**Keywords :** Customer Relationship Management, Operational CRM, Waterfall, UML, Customers Satisfaction.
