

EVALUASI PROGRAM PENCEGAHAN PENGENDALIAN INFEKSI MENGGUNAKAN METODE CONTEXT, INPUT, PROCESS, PRODUCT (CIPP) DI RUMAH SAKIT UMUM KOTA TANGERANG SELATAN

Zihan Nurahmawati

Abstrak

Program PPI memiliki urgensi yang tinggi untuk menyediakan pelayanan kesehatan preventif, kuratif, dan komprehensif kepada masyarakat. Evaluasi program PPI diperlukan untuk menganalisa rangkaian program yang telah dilaksanakan terhadap kualitas program PPI. Peneliti bertujuan untuk mengevaluasi pelaksanaan program pencegahan dan pengendalian infeksi di RSUD Kota Tangerang Selatan. Penelitian ini menggunakan metode kualitatif dengan pendekatan model evaluasi *Context Input Process Product* (CIPP). Data dikumpulkan dengan cara wawancara mendalam dan observasi menggunakan lembar observasi Standar Akreditasi Nasional Rumah Sakit (SNARS) 2022. Informan dalam penelitian ini berjumlah 5 orang, 2 partisipan merupakan anggota komite PPI RSUD Tangerang Selatan dan 3 orang lainnya merupakan sasaran penerima dan pelaksana program. Data dianalisis dengan 3 tahapan yaitu reduksi data, penyajian data, dan penarikan kesimpulan. Hasil penelitian evaluasi program PPI ini adalah pelaksanaan program, penetapan kebijakan, standar operasional prosedur, dan anggaran program PPI RSUD Kota Tangerang Selatan sesuai dengan standar hukum yang berlaku. Komite PPI memberikan pelatihan dan edukasi PPI. Namun, kepatuhan dan kesadaran menjalankan program PPI belum maksimal. Disarankan RSUD Kota Tangerang Selatan dapat memaksimalkan komunikasi, dan himbauan terkait kepatuhan pelaksanaan program-program PPI serta mempertahankan dan meningkatkan mekanisme kerja terstruktur komite PPI RSUD Tangerang Selatan.

EVALUATION OF THE INFESTATION CONTROL PREVENTION PROGRAM USING THE CONTEXT, INPUT, PROCESS, PRODUCT (CIPP) METHOD AT THE SOUTH TANGERANG CITY GENERAL HOSPITAL

Zihan Nurahmawati

Abstract

Infection prevention and control programs have a high urgency to provide preventive, curative, and comprehensive health services to the community. Evaluation of the PPI program is needed to analyze the series of programs that have been implemented towards the quality of the infection prevention and control program. The researcher aims to evaluate the implementation of the infection prevention and control program at the South Tangerang City Hospital. This study used a qualitative method with the Context Input Process Product (CIPP) evaluation model approach. Data was collected by means of in-depth interviews and observation using the Hospital National Accreditation Standard (SNARS) 2022 observation sheet. The informants in this study were 5 people, 2 participants were members of the infection prevention and control committee of South Tangerang General Hospital and 3 other people were the target recipients and program implementers. Data were analyzed with 3 stages, namely data reduction, data presentation, and conclusion drawing. Data validity used triangulation techniques. The results of this infection prevention and control program evaluation research are program implementation, policy determination, standard operating procedures, and budget for the South Tangerang City Hospital's IOP program in accordance with applicable legal standards. The infection prevention and control committee provides training and education on infection prevention and control. However, compliance and awareness in implementing the infection prevention and control program is not as high as it should be.
