## **Abstrak**

Stunting ialah kondisi di mana panjang badan balita tidak sesuai seperti usia seharusnya. Maka ini dapat menyebabkan gangguan pada perkembangan fisik serta kognitif anak, juga meningkatkan risiko penyakit, dan mempengaruhi kecerdasan mereka. Pencegahan stunting sebaiknya dimulai sejak dini, terutama dengan memastikan ibu hamil mengonsumsi suplemen kehamilan yang mengandung mineral dan multivitamin seperti asam folat, besi (Fe), vitamin A, seng (zink), vitamin B12, dan vitamin D. Tujuan penelitian mengetahui karakteristik riwayat konsumsi mineral dan multivitamin terhadap stunting di Bojongsari, Depok. Metode yang digunakan yaitu deskriptif retrospektif dan dalam desin cross-sectional. Sebanyak 90 data sampel memenuhi kriteria penelitian. Kejadian stunting di Kecamatan Bojongsari paling sering terjadi pada balita berusia 3-4 tahun, khususnya yang berjenis kelamin perempuan, yang ibunya berusia 31-40 tahun. Zink merupakan mineral yang paling sering tidak dikonsumsi, sedangkan asam folat menjadi mineral yang paling sering dikonsumsi. Tingkat konsumsi Fe, vitamin B12, vitamin D, dan vitamin A menunjukkan jumlah yang sama. Secara keseluruhan, kejadian stunting di Kecamatan Bojongsari, Kota Depok, paling banyak terjadi pada wanita berusia 31-40 tahun, dengan mayoritas kasus dialami oleh balita perempuan berusia 3-4 tahun. Selain itu, tingkat konsumsi mineral dan multivitamin di wilayah ini masih tergolong rendah.
