

HUBUNGAN KESELAMATAN DAN KESEHATAN KERJA PERAWAT DENGAN EFEKTIVITAS TINDAKAN PENCEGAHAN DAN PENGENDALIAN INFEKSI DI RSUD X WILAYAH JAWA BARAT

Annisya Windriati Putri

Abstrak

Dikarenakan tingkat risiko yang tinggi dari berbagai jenis risiko yang mungkin terjadi di wilayah Rumah Sakit, penting untuk mengambil suatu langkah pengendalian yang bertujuan untuk mengurangi atau bahkan menghilangkan risiko kecelakaan kerja dan risiko infeksi. Penelitian ini bertujuan untuk mengetahui hubungan keselamatan dan kesehatan kerja perawat dengan efektivitas tindakan pencegahan dan pengendalian infeksi di RSUD X Wilayah Jawa Barat. Penelitian ini diharapkan mampu memberikan gambaran terkait hubungan keselamatan dan kesehatan kerja perawat terhadap efektivitas tindakan pencegahan infeksi di RSUD X Wilayah Jawa Barat. Penelitian ini menggunakan metode kuantitatif dengan desain pendekatan *cross sectional* dan teknik *purposive sampling* dengan 177 responden. Analisis data dilakukan dengan uji Chi Square. Hasil Analisa data yang didapatkan implementasi keselamatan dan kesehatan kerja terdapat hubungan yang bermakna dengan implementasi pencegahan dan pengendalian infeksi ($p\ value = 0,019$; CI 95%). Diharapkan management RS mengadakan program pengembangan pendidikan, pelatihan bagi perawat yang belum pernah mendapatkan pelatihan K3 dan PPI.

THE RELATIONSHIP OF NURSES' OCCUPATIONAL SAFETY AND HEALTH WITH THE EFFECTIVENESS OF INFECTION PREVENTION AND CONTROL MEASURES IN RSUD X WEST JAVA REGION

Annisya Windriati Putri

Abstract

Due to the high level of risk from various types of risks that may occur in the hospital area, it is important to take control measures aimed at reducing or even eliminating the risk of work accidents and the risk of infection. This study aims to determine the relationship between nurses' occupational safety and health and the effectiveness of infection prevention and control measures at RSUD X West Java Region. It is hoped that this research will be able to provide an overview of the relationship between nurses' occupational safety and health and the effectiveness of infection prevention measures at RSUD X West Java Region. This research used quantitative methods with a cross sectional approach design and purposive sampling technique with 177 respondents. Data analysis was carried out using the Chi Square test. Results of data analysis on the implementation of occupational safety and health, there is a significant relationship with the implementation of infection prevention and control (p value = 0.019, CI 95%). It is hoped that the hospital management will hold an educational development program, training for nurses who have never received K3 and PPI training.
