

# HUBUNGAN APLIKASI ETIKA KEPERAWATAN DENGAN PERILAKU *CARING* PERAWAT DI RS SETIA MITRA JAKARTA

Divya Sakha Aditha

## Abstrak

Etika keperawatan adalah cara perawat memenuhi kewajibannya kepada pasien dalam memberikan asuhan keperawatan, maka etika keperawatan merupakan nilai fundamental yang harus dipatuhi oleh semua perawat. Banyak keluhan pasien juga disampaikan mengenai lemahnya etika keperawatan, yang berdampak pada perlakuan *caring* yang diberikan perawat kepada pasiennya. Tujuan penelitian ini adalah untuk mengetahui bagaimana penerapan etika keperawatan dan perilaku *caring* perawat berhubungan satu sama lain. Penelitian ini menggunakan metode *cross-sectional* dan analisis korelasional. *Purposive sampling* digunakan untuk mengumpulkan sampel dari 147 responden. Distribusi frekuensi digunakan dalam analisis univariat, dan uji *Spearman Rank* digunakan dalam analisis bivariat. Hasil analisis secara parsial didapatkan bahwa terdapat hubungan antara aplikasi nilai esensial keperawatan dengan perilaku *caring* perawat ( $p\text{-value} = 0,001$ ) dan terdapat hubungan antara aplikasi prinsip-prinsip etik keperawatan dengan perilaku *caring* perawat ( $p\text{-value} = 0,001$ ). Hasil analisis secara total didapatkan bahwa terdapat hubungan antara aplikasi etika keperawatan dengan perilaku *caring* perawat dengan  $p\text{-value} 0,001$  ( $p < 0,05$ ). Oleh karena itu, seluruh perawat dapat mempertahankan dan meningkatkan penerapan etika keperawatan sehingga pasien dapat merasakan perilaku *caring* yang optimal dari perawat.

**Kata Kunci:** Etika Keperawatan; Nilai Esensial Keperawatan; Perilaku *Caring* Perawat; Prinsip-Prinsip Etik Keperawatan.

# **THE RELATIONSHIP OF THE APPLICATION OF NURSING ETHICS WITH THE CARING BEHAVIOR OF NURSES AT SETIA MITRA HOSPITAL JAKARTA**

## ***Abstract***

*Nursing ethics is the way nurses fulfill their obligations to patients in providing nursing care, so nursing ethics is a fundamental value that must be adhered to by all nurses. Many patient complaints were also conveyed regarding weak nursing ethics, which had an impact on the caring treatment given by nurses to their patients. The aim of this research is to find out how the application of nursing ethics and nurses' caring behavior are related to each other. This research uses cross-sectional methods and correlational analysis. Purposive sampling was used to collect samples from 147 respondents. Frequency distribution was used in univariate analysis, and Spearman Rank test was used in bivariate analysis. The results of partial analysis showed that there was a relationship between the application of essential nursing values and nurses' caring behavior ( $p$ -value = 0.001) and there was a relationship between the application of nursing ethical principles and nurses' caring behavior ( $p$ -value = 0.001). The total analysis results showed that there was a relationship between the application of nursing ethics and nurses' caring behavior with a  $p$ -value of 0.001 ( $p < 0.05$ ). Therefore, all nurses can maintain and improve the application of nursing ethics so that patients can experience optimal caring behavior from nurses.*
