

PENDOKUMENTASIAN ASUHAN KEPERAWATAN METODE *ELECTRONIC HEALTH RECORD* DENGAN PERILAKU *CARING* PERAWAT: *LITERATURE REVIEW*

Regita Fitria Widayati

Abstrak

Elektronic Health Record memudahkan perawat mendokumentasikan asuhan keperawatan. Melalui kemudahan, perawat harus memiliki sikap *caring*. Selain membuat pasien nyaman, sikap *caring* membuat perawat mudah dalam mendapatkan data pasien. Penelitian ini adalah menganalisis literatur mengenai pendokumentasian asuhan keperawatan metode *Electronic Heath Record* dengan perilaku *caring* perawat. *Literature review* diambil dari *database* Pubmed, Sage, Ebsco, dan Emerald dengan Bahasa Inggris dalam 5 tahun terakhir. Kata kunci yang digunakan seperti (“*nurse*” OR “*nurses*” OR “*nursing*”) AND (“*Electronic Health Record*” OR “*EHR*”) AND (“*caring*” OR “*caring behavior*”). Hasil pencarian awal didapatkan 3.021 studi. Studi diseleksi menggunakan formula PICO dan metode CRAAP. Setelah penyaringan, terdapat 5 studi yang menjadi sumber *literature review* ini. EHR lebih mudah sehingga produktifitas meningkat, peningkatan efisiensi dan perilaku *caring* terlihat jelas . Kebijakan rumah sakit menggunakan EHR serta mempertahankan sikap *caring* menjadi solusi dalam penyelesaian masalah.

Kata Kunci : *Caring, Electronic Health Record, Perawat.*

NURSING DOCUMENTATION OF ELECTRONIC HEALTH RECORD WITH NURSING CARE BEHAVIOUR : LITERATURE REVIEW

Regita Fitria Widayati

Abstract

The Electronics Health Record provides nurses to document nursing care. Through comfort, nurses must have a caring attitude. Besides making patients comfortable, caring attitude makes nurses easy to get patient data. This study analyzes the literature about documenting nursing care with the Electronic Heath Record method and caring nurses. Literature review was taken from the Pubmed, Sage, Ebsco, and Emerald databases with English in the last 5 years. Keywords used such as (“*nurse*” OR “*nurses*” OR “*nursing*”) AND (“*Electronic Health Record*” OR “EHR”) AND (“*caring*” OR “*caring behavior*”). Initial search results were obtained by 3,021 studies. The study was selected using the PICO formula and the CRAAP method. After screening, there are 5 studies which are the source of this review literature. EHR is easier so productivity increases, efficiency increases and caring behaviors are clearly visible. Hospital policy using EHR and maintaining caring attitude is a solution in solving problems. Literature studies found, need further investigation in order to get better results.

Keywords : *Caring, Electronic Health Record, Nurse.*
